

Grill-Max[®] Express

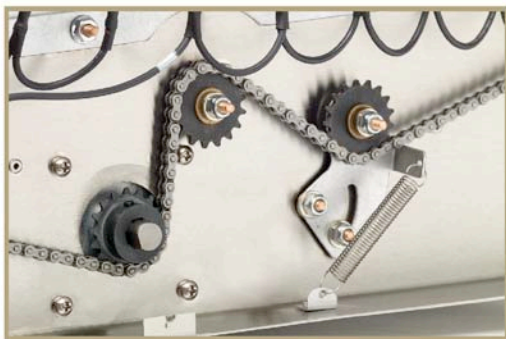

THE NEW STANDARD IN ROLLER GRILL VALUE

As industry needs change and evolve, so do our products. Here's how we've improved the world's most popular roller grills to give you greater reliability, value and overall performance.

How about an affordable grill you can count on time after time to start with? Next, we designed the grills to handle high-volume demands and also added these unique features:

- New low profile modern design improves visibility and is available in a variety of sizes accommodating capacities from 30 to 75 hot dogs to meet your counter space needs.
- Three coatings available, standard chrome rollers, optional easy clean Duratec and Super-Turn Duratec rollers. Super-Turn rollers are best in the industry for rolling products such as taquitos, egg-rolls and other bread type products.
- Stadium seating slanted roller design provides the best presentation of your products increasing sales and impulse purchases.
- Flat version available - ideal for island configurations.
- Control knobs provide separate section heating for front and rear rollers.
- Infinite temperature controls provide linear heat control for better performance.

Star's high-performance motor is designed for 24/7 operations, plus we developed a unique chain tension system that prevents the chain from becoming loose over time. And our new, advanced gear tooth design allows for more efficient and fluid roller movement.

MODEL X30S
SHOWN WITH OPTIONAL
XBW30 BUN BOX

We improved our Seal-Max[®] system by adding colored seals which provide quick, visual identification of front and rear zones. The dual seal system, one internal and one external seal at each roller, thus eliminating the potential for grease and food particles to enter the drive system.

Star Manufacturing • 10 Sunnen Drive • St. Louis, Missouri 63143 USA
